

Trade₂O

A front-end trading system for traders to borrow and lend all types of securities through the EquiLend platform

T₂O

Trade₂O is an easy to use browser-based system that enables traders to submit a list to borrow and lend securities, and negotiate all terms of the transaction.

Using a secure login to the browser, traders can communicate directly with each other to quickly agree trade terms with one or multiple counterparts.

How Trade₂O Works

Traders use Trade₂O to post their warm or hot borrowing needs and/or inventory to counterparties

A single Trade₂O window allows the trader to view all lists, filter to view orders across lists, and engage in trader-to-trader messaging

Each security can be accepted, rejected, modified, or left pending for later action

Traders can message each other on a trade and list level

Straight-through processing enables traders to simultaneously book accepted trades into a firm's proprietary system, increasing efficiency and reducing errors

Traders may filter individual securities offered to multiple counterparties to review all responses at a glance

Key Features

- Allows traders to negotiate and agree to terms before accepting the trade
- Immediate trader-to-trader communication via electronic messaging capability
- Email notification when a list is received
- Lists can be sent to multiple counterparties
- Each counterparty can indicate interest and bid with their best rate
- Straight-through processing enables accepted trades to be booked into a firm's proprietary system
- Download trade tickets into XLS files
- Ability to customize security ID format to personal preference on screen and downloads
- Customize your screen to show only your relevant fields
- Real time running totals of pending, accepted, modified, and rejected quantities and values
- Save and manage a list of securities for repeated use
- Optional dividend rate field for US templates to help facilitate ADR and GDR trading
