

# EQUILEND REAL-TIME DATA

EquiLend Data & Analytics' Real-Time Data provides securities finance transaction details, including security name, ticket size, rate level and collateral type, in real time. The dataset not only provides trade details within minutes of execution but also covers trade lifecycle events, including returns, recalls and re-rates.

Users can now gain an even greater level of transparency and quantitative data to drive trading decisions throughout the day.

Access Real-Time Data easily via the web-based user interface of NGT and DataLend's new Client Platform for Interactive Data Visualization or with a direct link through our API.

## **Benefits of Real-Time Data** include:

- Stay on top of names heating up or cooling throughout the day
- Gain insight into the intra-day dynamic of new vs. returned loans
- Focus on specific industries or sectors
- Compare activity in the lenderto-broker vs. broker-to-broker markets

#### \*NEW\*

In addition to new loans, users can now see transaction details for returns, recalls and re-rate transactions

# \*NEW\*

Retrieve multiple Real-Time Data points via API, expanding your searches beyond single security lookups

Extending the functionality of the Real-Time Data API beyond single security usage unlocks the ability to retrieve this data en masse using filters such as Region, Country and Asset Type, providing the most up-to-date trade information.
